

Day 4: Project Part I

Project description:

The marketing company you are working for will be paid a bonus for each country that meets both two conditions:

1) Average amount of sold wines greater than 500

AND

2) Average amount of sold gold products greater than 45

The company will not meet the minimum requirements and has to pay a contractual penalty for each country that meets both:

1) Average amount of sold wines less than 300

AND

2) Average amount of sold gold products less than 43

You need to create two table visualization with icons of your choice that help to see for which country the bonus and contractual penalty conditions are met.

Project questions:

How many countries meet the bonus conditions?

How many countries meet the contractual penalty conditions?
