# Day 4: Project Part II

Project description:

Part I: Your customers are not happy with the country names like this:

They prefer to have the complete country names.

You ask them to create a reference table with the complete country names and now you are asked to merge in the complete country names into that table (see resources).

Part II:

You are now asked to create a report with the following requirements:

- Overview of how many accepted campaigns (each campaign no. visible)
- Overview of how many sales in each category
- Needs to filterable by Education, Marital_Status and Country

Create an easy to use and appealing report page that meets the requirements.

(Hint: Do all of the steps needed including unpivoting columns and fixing broken relationships.)
